EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Mr. Bujold on 03/20/08.

3. The application has been amended as follows:

- Claims 12-22 have been canceled.
- New claims 23-33 have been added as follows:

23. (NEW) A method for controlling functions of a motor vehicle (1) comprising a drive motor (2), a driving clutch (3), a service brake (13, 14) that acts upon wheels (11, 12), a working device (21) and a hydraulic pump (15) that supplies actuators on the driving clutch (3), the service brake (13, 14) and the working device (21) with pressure medium via hydraulic pressure conduits,

the method comprising the step of automatically opening the driving clutch (3) and automatically closing the service brake (13, 14) when a load acting upon the working device (21) of the motor vehicle exceeds a predetermined load threshold or is activated so as to exceed.

24. (NEW) The method according to claim 23 further comprising the step of opening the driving clutch (3) and closing the service brake (13, 14) when one or more of a pressure, a force and a filling state height sensor (35) on the working device (21) signals a control device (22) that hydraulic pressure available for a propulsion operation of the working device (21) is no longer sufficient to master a load at hand.

25. (NEW) The method according to claim 23 further comprising the step of activating the opening of the driving clutch (3) and closing of the service brake (13, 14) when a speed of travel is one of zero or approximately zero.

26. (NEW) The method according to claim 25 further comprising the step of signaling the speed of travel of the motor vehicle to a control device (22) via sensors (33, 34) on one or more of drive or output shafts (6, 7) of the wheels (8, 9) and on a transmission input shaft.

27. (NEW) The method according to claim 23, further comprising the step of activating a parking brake of the motor vehicle instead of or in addition to the service brake (13, 14).

28. (NEW) The method according to claim 23, further comprising the step of, one of during or after opening the driving clutch (3), transmitting via a control device (22) a signal for changing power to one of a motor control device (23) or directly to an output regulating device of the drive motor (2).

29. (NEW) The method according to claim 28, further comprising the step of using the signal to the motor control device (23) to trigger a reduction in power output of the motor (2).

30. (NEW) The method according to claim 23, further comprising the step of closing the driving clutch and opening one or more of the service brake (13, 14) and a parking brake upon ending a working operation of the working device (21).

31. (NEW) The method according to claim 30, further comprising the step of, one of during closing or after closing the driving clutch (3) and opening one or more of the service brake (13, 14) and the parking brake, issuing via the control device (22) a signal to change a power output of the drive motor (2).

32. (NEW) A device for controlling functions of a work motor vehicle (1) with a drive motor (2), a driving clutch (3), a service brake (13, 14) that acts on motor vehicle wheels (11, 12), a working device (21) and with a hydraulic pump (15), which supplies actuators

on the driving clutch (3), on the service brake (13, 14) and on the working device (21) with pressure medium through hydraulic pressure conduits,

wherein the driving clutch (3) is automatically opened and the service brake (13, 14) is automatically closed when a load acting upon the working device (21) of the motor vehicle exceeds a preset load threshold or is activated so as to exceed.

33. (NEW) The device according to claim 32, wherein a control device (22) is connected by a control conduit (24) via one of a motor control device (23) or directly to a power regulation device of the drive motor (2).

4. The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or render obvious a motivation to provide for a method/device for controlling functions of a motor vehicle, which comprises a drive motor, a driving clutch, a service brake, a working device and a hydraulic pump for supplying actuators on the driving clutch, the service brake and the working device with pressure medium as defined by the limitations of claims 23 and 32; wherein, when a load acting on the working device exceeds a preset load threshold or is activated so as to exceed, the driving clutch is automatically opened and the service brake is automatically closed.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure (see attached form PTO-892).
